A hip fracture is a break that occurs in the upper part of the femur (thigh bone). Symptoms may include pain around the hip particularly with movement and shortening of the leg. Usually the person cannot walk. They most often occur as a result of a fall. Risk factors include osteoporosis, taking many medications, alcohol use, and metastatic cancer. ...

The Gustilo open fracture classification system is the most commonly used classification system for open fractures. It was created by Ramon Gustilo and Anderson, and then further expanded by Gustilo, Mendoza, and Williams. This system uses the amount of energy, the extent of soft-tissue injury and the extent of contamination for determination of fracture severity. Progression from grade 1 to ...

The following guidance is based on the best available evidence. The full guideline and addendum give details of the methods and the evidence used to develop the guidance.. Some aspects of hip fracture management are already covered by NICE guidance and are therefore outside the scope of this guideline.
