

### electron beam interactions with pdf

The electron is a subatomic particle, symbol  $e^-$  or  $\hat{1}^2 \hat{a}^-$ , whose electric charge is negative one elementary charge. Electrons belong to the first generation of the lepton particle family, and are generally thought to be elementary particles because they have no known components or substructure. The electron has a mass that is approximately 1/1836 that of the proton.

The free-electron laser was invented by John Madey in 1971 at Stanford University. The free-electron laser utilizes technology developed by Hans Motz and his coworkers, who built an undulator at Stanford in 1953, using the wiggler magnetic configuration which is one component of a free electron laser. Madey used a 43 MeV electron beam and 5 m long wiggler to amplify a signal.

Abstract With increasing interest in millimeter-wave wireless communications, investigations on interactions between the human body and millimeter-wave devices are becoming important. This paper gives examples of today's regulatory requirements, and provides an example for a 60 GHz
