Geometry (from the Ancient Greek:  $\gamma\epsilon\omicron\mu\epsilon\tau\epsilon\tau\iota\kappa\eta$ ; geo-"earth", -metron "measurement") is a branch of mathematics concerned with questions of shape, size, relative position of figures, and the properties of space. A mathematician who works in the field of geometry is called a geometer.. Geometry arose independently in a number of early cultures as a practical way for dealing with lengths ...

Straightedge and compass construction, also known as ruler-and-compass construction or classical construction, is the construction of lengths, angles, and other geometric figures using only an idealized ruler and compass.. The idealized ruler, known as a straightedge, is assumed to be infinite in length, have only one edge, and no markings on it.The compass is assumed to "collapse" when lifted ...

We present a learning-based approach to computing solutions for certain NP-hard problems. Our approach combines deep learning techniques with useful algorithmic elements from classic heuristics.

The scientific activity of Vladimir Varicak (1865-1942), professor of mathematics at the University of Zagreb, was mainly in non-Euclidean geometry and its applications to Einstein's theory of relativity. His lecture delivered in 1911 at the German Mathematical Society in Karlsruhe has been published in 1912 in Jahresberichte der Deutschen Mathematiker Vereinigung, and translated from German ...

Professor Frances Kirwan Oxford University (United Kingdom) Frances Kirwan is the Savilian Professor of Geometry at the Mathematical Institute in Oxford. Her research lies in the area of algebraic geometry (mostly over the field of complex numbers) and its links with other parts of geometry, especially symplectic (and hyperkähler) geometry.
