In continuum mechanics, stress is a physical quantity that expresses the internal forces that neighbouring particles of a continuous material exert on each other, while strain is the measure of the deformation of the material. For example, when a solid vertical bar is supporting an overhead weight, each particle in the bar pushes on the particles immediately below it.

Fluid statics or hydrostatics is the branch of fluid mechanics that studies "fluids at rest and the pressure in a fluid or exerted by a fluid on an immersed body".. It encompasses the study of the conditions under which fluids are at rest in stable equilibrium as opposed to fluid dynamics, the study of fluids in motion. Hydrostatics are categorized as a part of the fluid statics, which is the ...

Note: The dual degree requires twenty hours of technical electives. The twenty hours consists of: nine hours of approved aerospace engineering technical electives, nine hours of approved mechanical engineering technical electives, and the final two hours can be either aerospace engineering or mechanical engineering

approved technical electives.

Civil Engineering FE Exam Preparation Workbook contains over 600 problems designed to reinforce your understanding of civil engineering concepts and equations found in the NCEES FE Reference Handbook. Like the actual exam, problems are grouped by topic and are multiple-choice. Solutions are provided for all problems so you can review problem-solving methods.

ME 101. Introduction to Mechanical Engineering. 3 Credits. This course encourages the development of visualization, technical communication, documentation, and fabrication skills including 3-D geometric modeling as applied to CADD applications using current methods and techniques commonly found in industry.
