The aim of this textbook is to introduce machine learning, and the algorithmic paradigms it offers, in a principled way. The book provides an extensive theoretical account of the fundamental ideas underlying machine learning and the mathematical derivations that transform these principles into practical algorithms.

Machine Learning 14. In general, we can add the same sort of penalty to any number of models, such as logistic regression, neural net models, recommender systems etc. The primary goal again is to hopefully increase our ability to generalize the selected model to new data.

LEARNING INPUT-OUTPUT FUNCTIONS 5. 1.1.3 Varieties of Machine Learning. Orthogonal to the question of the historical source of any learning technique is the more important question of what is to be learned. In this book, we take it that the thing to be learned is a computational structure of some sort.

Introduction. In traditional computing, algorithms are sets of explicitly programmed instructions used by computers to calculate or problem solve. Machine learning algorithms instead allow for computers to train on data inputs and use statistical analysis in order to output values that fall within a specific range.
