Deep learning (also known as deep structured learning or hierarchical learning) is part of a broader family of machine learning methods based on learning data representations, as opposed to task-specific algorithms. Learning can be supervised, semi-supervised or unsupervised. Deep learning architectures such as deep neural networks, deep belief networks and recurrent neural networks have been ...

Time Series Classification from Scratch with Deep Neural

In recent years, deep artificial neural networks (including recurrent ones) have won numerous contests in pattern recognition and machine learning.

Deep learning in neural networks: An overview - ScienceDirect

An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation. An artificial neuron mimics the working of a biophysical neuron with inputs and outputs, but is not a biological neuron model.

Abstract: Deep learning algorithms have been shown to perform extremely well on many classical machine learning problems. However, recent studies have shown that deep learning, like other machine learning techniques, is vulnerable to adversarial samples: inputs crafted to force a deep neural network (DNN) to provide adversary-selected outputs.

A Fast Learning Algorithm for Deep Belief Nets 1531 weights, w_{ij} , on the directed connections from the ancestors: $p(s_i = 1) = \frac{1}{1 + \exp(-\sum_j w_{ij} s_j)}$, (2.1) where b_i is the bias of unit i . If a logistic belief net has only one hidden layer, the prior distribution over the hidden variables is factorial because
