Finite Element Analysis of Structures. The Engineer's Golden Rule: Never use a 1/4 inch bolt where a 1/2 inch bolt will do! Before retiring in 1990, I worked at the Lawrence Livermore National Lab for 30 years.

Skin pass is a fundamental step in the manufacturing of L<sup>Å</sup>ders Bands-free steel sheets. An analysis of the strain heterogeneity and L<sup>Å</sup>ders Bands in the skin-pass is presented, employing Finite Element Analysis (FEA) and true-stress true-strain curves displaying an initial yield stress peak higher than that observed in common tensile testing.

Grain boundaries are natural obstacles to the motion of dislocations during plastic straining of crystalline matter. As such, they may be the cause of grain-scale heterogeneity in terms of the mismatch of the elastic-plastic strain rate, internal stress, and crystallographic reorientation rate fields.

Various concepts exist to introduce texture-related sheet anisotropy into finite element models for sheet forming. The initial material anisotropy existing before sheet deformation can be incorporated either through an anisotropic yield surface function or directly via the incorporation of crystallographic texture models into the finite element codes.

A finite-state machine (FSM) or finite-state automaton (FSA, plural: automata), finite automaton, or simply a state machine, is a mathematical model of computation. It is an abstract machine that can be in exactly one of a finite number of states at any given time. The FSM can change from one state to another in response to some external inputs; the change from one state to another is called a ...

In mathematics, a group is a set equipped with a binary operation which combines any two elements to form a third element in such a way that four conditions called group axioms are satisfied, namely closure, associativity, identity and invertibility. One of the most familiar examples of a group is the set of integers together with the addition operation, but groups are encountered in numerous ...

80% of communities are served ONLY by trucks because there are 4.1 million miles of roads but only 95,000 route miles of rail tracks. I too would like to see more rail, but all of the rail companies are privately owned, and more than any other industry they have to plow most of their profits back into maintaining their rail lines.
